

## Position: Software Engineer – Web Development

### Role Overview

The Software Engineer will be actively involved in developing the company's products and services. The candidate will be a part of the Web Development Team and play a critical role in further enhancing the company's web applications and the scope of work will span across design, development, implementation and management of these applications and their underlying technology platforms.

### Responsibilities

- To proficiently undertake programming related activities using PHP, Perl, MySQL, Linux either independently or as a project team member.
- To competently manage databases on MySQL; prior knowledge in this is mandatory.
- To exhibit clear programming fundamentals and experience with Object Oriented Programming and Design Patterns.
- To design and develop application front-ends using CSS and JavaScript on underlying frameworks; prior knowledge of the Bootstrap framework will be a plus.

### Skills and Abilities

- Should have experience of using Linux, including scripting.
- Familiarity with Perl is desirable but not mandatory.
- Experience on MVC Framework like CakePHP and JQuery UI will definitely fetch you brownie points.
- Should have a good understanding of Web Applications theories and Structural Designs.
- Having a good sense of User Interface Design and aesthetics of a web utility will work in your favour.

### Personal Attributes

- Must possess good communication skills – spoken and written English – in order to be able to explain technical nuances clearly and unambiguously.
- Should have good problem solving skills to tackle issues in day-to-day activities.
- Must be flexible with schedules to meet demands of an operational business.
- Should be a dependable team-player who ensures that the goals of the team are kept in focus at all times.

### Experience

- 1-3 years of relevant experience.
- Freshers with exceptional academic and programming skills will be considered for Trainee positions.

### Academic Qualification

Candidate must be a Graduate in any field, and you'd get favourable consideration if you have a technical background. This should be further supported with a recognised course in software development.

### Salary

As per industry standards.
